Nevasa monitorea alrededor de 1800 ETFs de todos los emisores, focalizándose en cada momento, en los cien ETFs de mayor AUM (montos de activos administrados). Si bien los ETFs constituyen una muestra pequeña de las inversiones globales, tienen la virtud de, por un lado, detectar el apetito de los inversores, y por el otro, de ser útiles para la toma de decisiones puesto que los datos de flujos están disponible casi en tiempo real, con muy poco rezago.
